

2023-2024

QUALITY THAT MATTERS

C-Force Textiles started in 1992 and has since become one of New Zealand's largest apparel suppliers. Thirty years later, we are still going strong in a very competitive industry and continue to work hard to supply quality garments with great value for all our customers.

In this year's catalogue, our short-sleeve merinos and headwear make their debut. From our Somers merino polo, Heaphy merino tee and Merino Beanie, we have introduced more options to meet each individual customer's needs.

Customer feedback, attention to detail and standards of high quality are all priorities in our products. We have taken your feedback into consideration and added more colours to our top selling hoodies. Our Fox sweater now includes royal blue and our Egmont hoodies now offers emerald green, bottle green, rich gold and charcoal marle.

As with many well-known brands, we have adopted the BSCI method to monitor our global supply chain. We work with cotton suppliers that have the OEKO-TEX standard 100 certification which tests every component of a garment for harmful substances before being used in production. We are also members of SMETA – a global audit methodology that gives us a closer look at the labour, health and safety, environmental practices, and business ethics of our suppliers. It's our continued commitment to not only provide high quality garments, but also to ensure that we know how every aspect of each garment is made and manufactured.

C-Force Offers Indent Orders

We offer a professional bulk and custom order service, enabling the development of a bespoke garment to exact specifications.

From the entire C-Force team.

COTTON

Made from combed cotton to give a smooth surface. Cotton is globally the most preferred fibre to wear for its comfort.

COTTON ELASTINE

A blended yarn of cotton and the elastomeric fibre, generically called elastane. The most common blend of this yarn is 95% cotton and 5% elastane. Elastane helps to retain the shape of a garment, and provides extra comfort by being more stretchy than other fabrics.

COTTON/POLY

A blended yarn of cotton and polyester, normally 60 - 80% cotton and 20 - 40% polyester, which is good for people who like to wear cotton but enjoy a stronger, longer lasting garment.

QUICKDRY

Made from 100% polyester, the yarn is coated with a quickdry solution and is then heat sealed, which is knitted into fabric. Being yarn coated means that the garment will remove moisture from the skin and move it to the surface of the fabric where it will evaporate, making the garment cool and dry to wear.

POLY/COTTON

A blended yarn of polyester and cotton which is normally 60 - 65% polyester and 30 - 35% cotton. Poly/Cotton is a hardy and durable yarn, and is good for being relatively wrinkle free and easy to care for.

MERINO

The hardest of wool fibre that is used in clothing, merino makes beautiful garments that can last for a long time. New technology allows this fabric to be machine washed, however, it must be on a wool cycle using wool detergent. Merino fabric breathes easily, so it provides the ultimate comfort in a garment.

RIPSTOP FABRIC

A strong fabric that is made by adding thicker yarns in the warp and weft at regular intervals to make the appearance of small squares/ rectangles. The thicker yarn helps to prevent the fabric from ripping. Heavier ripstop is commonly used in yacht sails, while finer ripstop is generally used in outdoor clothing and workwear.

DINTEX®

Our brand of fabric that is microporous – which means that it is 3 layers that are bonded together, creating a windproof and showerproof garment, and providing excellent warmth and comfort whilst remaining lightweight.

ANTI-PILL

A heat treated liquid coating applied to 100% polyester yarn to help prevent the fibres from forming small balls on the surface of the garment, also known as pilling. Always buy an anti-pill polarfleece.

ANTI PILL YARN

A specially formulated new yarn technology developed by C-Force Textiles.

ANTI-STATIC

Polyester yarn that has a liquid coating applied to it to help stop electricity conducting when in contact with other synthetic garments or surfaces, and when worn.

UV40+

This coating helps to block UV rays from penetrating the fabric. Some fabrics (like heavy weight nylon elastane) have in-built UV protection simply from the construction of the fabric used in outdoor clothing and workwear. The UV rating is in line with sunblock ratings in Australia & NZ.

REFLECTIVE

Garments with strips of reflective tape to provide extra visibility when worn in dull light/darkness.

SHOWERPROOF

Fabrics that are treated with a coating on the inside to reduce water penetrating through it. Showerproof fabric allows the wearer to be in light rain for 10-20 minutes before water will penetrate through.

WINDPROOF

Fabrics that are treated with a coating on the inside to be resistant to wind to provide warmth and comfort.

WATERPROOF

A laminated TPN membrane technology allows this fabric to be fully waterproof and breathable for the ultimate comfort in wet weather.

DISCLAIMER
The product/fabric colour illustrated are matched as closely to the garments as modern printing process will allow. Actual product colour can also vary slightly from shipment to shipment and this is beyond our control. Reasonable allowance of 6-8% tolerance in sizes, measurements and weights should be allowed when placing your order.
